Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: None of the references cited or the art searched disclose or teach alone or in combination accessing a content site by receiving a sound passage, sending it to service system, comparing it with stored representations of sound passages, and identifying and accessing URI's associated with the selected stored representations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Relevant Prior Art

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Gaspar (5613056) discloses tools for speech synchronized animation including a Speech Sync Lab which analyzes a sound and creates a phonetic string, and then uses a RAVE driver to identify the sound resource and the phonetic string including timing values to reproduce the sound.

Atsmon (6607136) discloses an authentication system, which uses an electronic card to receive sound waves and compare them with stored data to make sure that the proper coupon data is stored. The inputted data is used to check if the appropriate URL is being utilized.

Art Unit: 2125

Eyal (6721741) discloses a system to locating web resources on the Internet. The system includes a web browser component, and a database. A search module controls the web browser component to access at least one web site. The search module controls the web browser component to identify a plurality of links to media web resources at the web site. Each of the plurality of links is selectable to open a media web resource. The search module stores the plurality of links in the database. As an example, a user may specify a media creation from a specific category. For example, the user may input a search request for "nature sounds". A web server module accesses media and metadata database for parameters that match "nature sounds". In one application, a play-list is located that is pre-programmed to provide URLs to web resources containing nature sounds. The response then comprises one or more play-lists, each containing multiple URLs to web resources containing nature sounds. In another application, a category parameter or sub-parameter is searched for "nature sounds". The response may include one or more URLs that are not pre-programmed into play-lists. The response may provide URLs to a media playback component one at a time, in groups (such as in play-lists), or all at once.

Neumeyer (6760697) discloses a user inputted centralized processing speech system where a client request from an application server causes an embedded code to be generated and decoded. The browser determines where to initiate the request for speech service specified by the URL, and the appropriate parameters to transmit to the URL speech server.
